

Comprehensive Backhaul and Safety Training

September 16-20, 2019 Downtown Anchorage

Free training and \$1000/person travel scholarships are available upon completion of the training

Training Description

The first half of this training will be taught by SWA (Sustainable Workplace Alliance). They will be covering HAZMAT safety, proper selection and use of PPE, and specifically respirator use and fit testing. If anyone has workers using respirators for their job, this is a great opportunity to get fit tested and learn proper use.

The second half of training will be backhaul focused and will include hands-on packaging training for lead acid batteries, e-waste, and fluorescent lights, and full DOT hazardous materials regulations training.

Medical Clearance for Respirator Fit Testing

Please note that for the respirator fit test portion of the training, you will need to be medically cleared to wear a respirator, meaning your doctor says that wearing a respirator won't hurt you. If you are not sure you are cleared, you need to ask your doctor BEFORE you attend the training.
